

EASILY CREATE YOUR UNIQUE SKU NUMBER

The SKU Configurator can be used to determine the composition of the SKU number. Selection of some characters from the item's category, subcategory, vendor's part number, manufacturer or vendor will add them to the SKU number's format. Users can instead choose that an auto-generated number to be part of the SKU.

In addition, the ability exists of designating how many items have been created under a category and assign that particular item an incremented number anywhere within the SKU configuration.

WHAT SIMMS CAN DO FOR YOUR BUSINESS

- Simply configure and create unique SKU numbers
- Facilitate advanced inventory management
- Simple to use

The Inventory Software you can rely on

SKU MODULE FEATURES

- From the Setup>Global Settings>Options tab, you will find a Use Automatic SKU feature that when turned on will enable the new SKU Configurator feature in SIMMS.
- **Vendor SKU Field:** An SKU field exists in the vendor setup screen if you have configured the SKU manager to utilise Vendor information then the SKU field will display the Vendor SKU portion of the code to be used in the Item SKU code.
- **Manufacturer SKU Field:** An SKU field exists in the Manufacturer setup screen if you have configured the SKU Manager to utilise Manufacturer information then the SKU field will display the Manufacturer SKU portion of the code to be used in the Item SKU code.
- **Category and Sub-Category SKU Field:** An SKU field exists in the Category and Sub-Category setup screens if you have configured the SKU manager to utilise Category and/or Sub-Category information then the SKU field will display the Category and/or Sub-Category SKU portion of the code to be used in the Item SKU code.
- **Item Maintenance and SKU:** SIMMS has the capability to assign a particular SKU item number to each inventory item configured in the Inventory Manager, enabling users to automatically assign a particular product's item number based on an SKU formula that can be devised using the SKU Configurator.
