

## SIMPLE CALCULATION OF DEPRECIATION

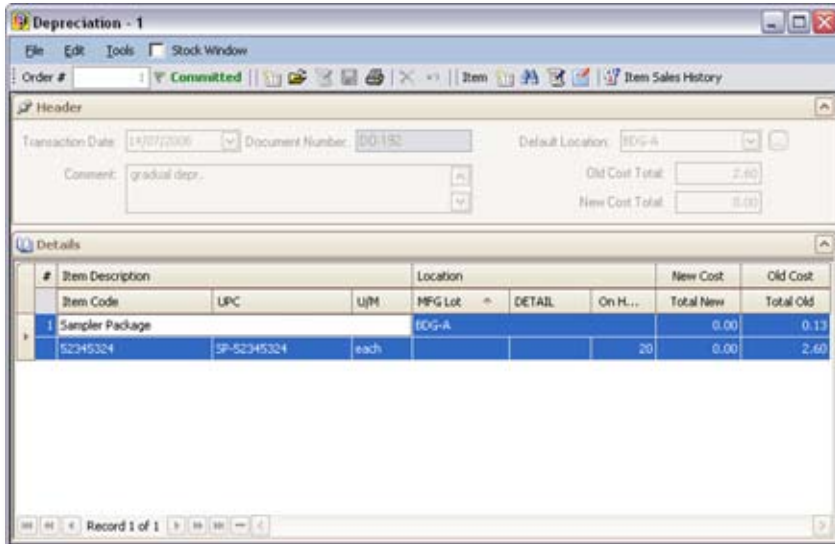

One requirement of accurate accounting and inventory management is the knowledge of an item's depreciation. Calculation of depreciation makes it easier for you to rotate stock to full advantage and know which items bring the greatest returns. This detail of asset management is fully integrated into SIMMS to suit your requirements while eliminating redundant data entry. Information available through this module enables you to forecast next year's depreciation expenses by employing SIMMS Accounting modules, allowing the allocation of the depreciation for groups of assets – or individual assets – to more than one source of funding.

### WHAT SIMMS CAN DO FOR YOUR BUSINESS

- Enable easy depreciation calculations
- Eliminates the redundant data entry
- Facilitates depreciation forecasting

The Inventory Software you can rely on

## DEPRECIATION MODULE FEATURES

- Employs both standard and customised depreciation methods.
- Interfaces easily into barcode technology.
- Complies with both GASB (Governmental Accounting Standards Board) 34 and 35 requirements.
- 'FIFO by Location' warehouse data is automatically updated with each adjustment.
- Implements depreciation of assets the month of receipt.
- Allows assignment of depreciation related fields either individually or globally within the system.
- Calculates depreciation monthly, quarterly or annually.
- Review the Depreciation History table, which updates automatically with each transaction.
- Generate automatic journal entries.
- Develop custom reports or use built-in reports to accumulate the data you require.
- Control access to depreciation data through SIMMS' built-in user rights protection.
