

## ADVANCED MANUFACTURING MANAGEMENT

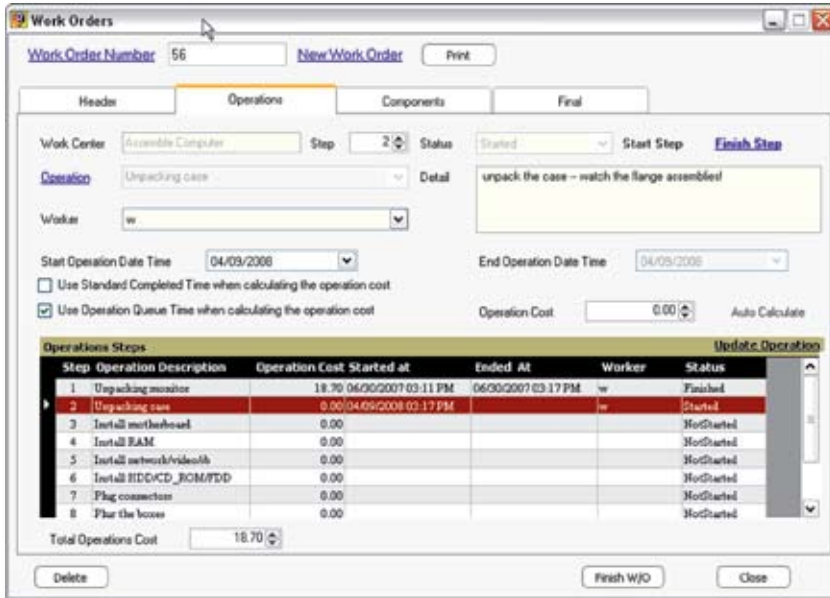

The SIMMS Work Order module is the cornerstone of the system's Manufacturing Solution. The SIMMS Work Order module provides you with complete control of the manufacturing process and the ability to see up-to-the-minute work in process information. This module is particularly well-suited for companies engaged in assemble to-order, engineer-to-order or make-to-order processing.

### WHAT SIMMS CAN DO FOR YOUR BUSINESS

- Obtain a complete snapshot of your manufacturing process
- Initiate and control manufacturing resources
- Simple to use
- Advanced reporting

The Inventory Software you can rely on

## WORK ORDER MODULE FEATURES

- It allows you to issue work orders, assemble kits, develop schedules and track costs associated with the manufacturing process.
- You can evaluate missing costs, examine any variance from standards, check material shortages, analyse work centre capacity and confirm tool requirements.
- Additional reporting capabilities inform you of the status of open work orders, work in process and work order history, allowing you to print inventory labels.
- When SIMMS Work Order processing is used in conjunction with Bill of Materials, the material required to produce a product can be automatically merged from the appropriate bill.
- All of the required paperwork to move the job through the shop can then be generated from each work order, including travellers, picking sheets, dispatch sheets and operation tickets.
- Enhanced program management functionality, helps control each step in project development and tracks all running costs to project completion.
